BACHELOR THESIS

Štěpán Henrych

The PD-KIND algorithm in the Golem SMT solver

Department of Distributed and Dependable Systems

Supervisor of the bachelor thesis: doc. RNDr. Jan Kofroň, Ph.D.

Study programme: Informatika

Prague 2024

I declare that I carried out this bachelor thesis on my own, and only with the cited sources, literature and other professional sources. I understand that my work relates to the rights and obligations under the Act No. 121/2000 Sb., the Copyright Act, as amended, in particular the fact that the Charles University has the right to conclude a license agreement on the use of this work as a school work pursuant to Section 60 subsection 1 of the Copyright Act.

Title: The PD-KIND algorithm in the Golem SMT solver

Author: Štěpán Henrych

Department: Department of Distributed and Dependable Systems

Supervisor: doc. RNDr. Jan Kofroň, Ph.D., Department of Distributed and Dependable Systems

Abstract: Use the most precise, shortest sentences that state what problem the thesis addresses, how it is approached, pinpoint the exact result achieved, and describe the applications and significance of the results. Highlight anything novel that was discovered or improved by the thesis. Maximum length is 200 words, but try to fit into 120. Abstracts are often used for deciding if a reviewer will be suitable for the thesis; a well-written abstract thus increases the probability of getting a reviewer who will like the thesis.

1 Introduction

1.1 Goals

1.2 Definitions

1.2.1 Golem

1.2.2 PD-Kind

1.2.3 Transition System

1.2.4 Satisfiability Modulo Theories

1.2.5 OpenSMT

2 Analysis

2.1 Induction vs k-Induction

2.2 Reachability checking procedure

2.3 PD-Kind procedure

2.4 Push procedure

3 Implementation

3.1 Data structures

3.1.1 Reachability frame

3.1.2 Induction frame

3.2 Classes

3.2.1 Reachability class

3.2.2 PD-Kind engine

4 Experiments

5 Conclusion
